## IN THE CLAIMS

Please amend the claims, without prejudice or waiver, as follows.

(currently amended): A water-using unit, comprising:
 a cabinet;

a treated water source sharing at least part of said cabinet such that said treated water source is integral with the water-using unit, said treated water source comprising a reverse osmosis water treatment system including a flexible reservoir in which water treated by said reverse osmosis water treatment system is stored;

a host system performing host functions, said host system coupled to said cabinet and to said treated water source, said host system comprising a cooling source, and wherein said reservoir is located in cooling proximity to said cooling source so as to allow conductive cooling of said water in said flexible reservoir; and

a control system coupled to and controlling operation of said treated water source and said host system.

- 4. (canceled)
- 5. (canceled)
- 6. (previously presented): The unit of Claim 1, and further comprising:

  a condenser coupled to said host system; and

reject water generated by said reverse osmosis water treatment system, said reject water passing proximate said condenser to assist in heat removal.

7. (original): The unit of Claim 1, and further comprising:

a condenser coupled to said host system; and

inlet water, said inlet water passing proximate said condenser to assist in heat removal.

- (original): The unit of Claim 1, wherein said host system comprises an ice making system.
- 9. (canceled)
- 10. (canceled)
- (previously presented): The unit of Claim 1, wherein said cooling source comprises an evaporator.
- 12. (previously presented): The unit of Claim 1, wherein said cooling source comprises ice.
- (original): The unit of Claim 8, wherein said control system causes water to be pulsed in said ice making system.
- 14. (previously presented) The unit of Claim 8, wherein water not frozen in said ice making system is returned to said reservoir.
- 15. (original): The unit of Claim 1, wherein said host system comprises a beverage dispensing system.
- 16. (canceled)
- 17. (canceled)
- 18. (previously presented): The unit of Claim 15, wherein said beverage dispensing system includes:

a carbonator coupled to said reservoir, said carbonator generating carbonated water:

at least one supply of syrup; and

- a plain water circuit for non-carbonated water, such that carbonated and non-carbonated beverages may be dispensed.
- 19. (original): The unit of Claim 18, and further comprising at least one supply of flavor, such that flavors may be added to the carbonated and non-carbonated beverages.
- 20. (previously amended): A system, comprising:

a water-using unit having a cabinet and a first user access area, said water-using unit including a treated water source sharing at least part of said cabinet such that said treated water source is integral with said water-using unit and further including a host system performing host functions, said host system coupled to said treated water source; and

a separate unit remote from said water-using unit such that said separate unit does not share said cabinet, said separate unit having a second user access area, said separate unit supplied by said treated water source, and wherein said first and second user access areas are not presented as a combined user access area.

- 21. (original): The system of Claim 20 wherein said treated water source comprises a reverse osmosis system.
- 22. (original): The system of Claim 21, wherein said treated water source further comprises a reservoir coupled to said reverse osmosis system.

- 23. (original): The system of Claim 20 wherein said treated water source comprises a reservoir.
- 24. (previously presented): The system of Claim 23, and further comprising a cooling source, said reservoir located in cooling proximity to said cooling source.
- 25. (original): The system of Claim 20, wherein said host system comprises an ice making system.
- 26. (original): The system of Claim 25, wherein said separate unit comprises a beverage dispenser.
- 27. (previously presented): The system of Claim 25, wherein:
  said treated water source comprises a reservoir; and
  said ice making system includes a cooling source, said reservoir
  located in cooling proximity to said cooling source.
- 28. (original): The system of Claim 20, wherein said host system comprises a beverage dispensing system.
- 29. (original): The system of Claim 28, wherein said separate unit comprises an ice maker.
- 30. (original): The system of Claim 28, wherein said treated water source comprises a reverse osmosis system and a reservoir, said reservoir coupled to said beverage dispensing system.
- 31. (presently amended): A water-using unit, comprising:a cabinet;

a treated water source sharing at least part of said cabinet such that said treated water source is integral with the water-using unit, said treated water source comprising a reservoir;

a host system performing host functions, said host system coupled to said cabinet and to said treated water source;

a control system coupled to and controlling operation of said treated water source and said host system; and

a cooling source located in cooling proximity to said reservoir so as to allow conductive cooling of said reservoir.
